

Human Papillomavirus Vaccines Session

Peter Szilagyi, MD, MPH
Chair, ACIP HPV Vaccines Work Group

Advisory Committee on Immunization Practices
June 20, 2018

New issue being considered by ACIP HPV Vaccines Work Group

- ❑ An application to expand the age indication for 9-valent HPV vaccine through age 45 years in males and females was submitted to FDA in April 2018
 - Current licensure is through age 26 years
- ❑ FDA accepted the application and will give this a priority review
- ❑ Focus of this HPV session is to begin the evidence review for policy considerations

Recap: HPV Vaccine Session

February 2018 ACIP Meeting

- ❑ Post-licensure 9-valent HPV vaccine safety data
 - VAERS and VSD – reassuring safety findings
- ❑ Harmonization of HPV vaccination age recommendations for females and males through age 26 years: background data
 - Burden and trends in HPV-associated cancers in males and females
 - Epidemiology of HPV infection in males
 - Work Group plans

Application for expansion of age indication for 9-valent HPV vaccine

- ❑ ACIP HPV Vaccines Work Group was informed of the application for the age expansion between February and June 2018 ACIP meetings
- ❑ Work Group calls have focused on background information related to the expanded age
- ❑ Harmonization will be part of considerations going forward as the Work Group considers evidence for the expanded age indication
 - There is strong support on the Work Group for harmonization

Agenda for June 2018 HPV session

- ❑ Background
- ❑ HPV vaccine in mid-adults, results from clinical studies
- ❑ Considerations and Work Group plans
